Ikono 

After many months of analysis, conception and design of environmental sanitizers capable of responding to the increase of the needs for air disinfection of large surfaces, today we are pleased to inform you that the new Witek proposal, **IKON** has been born. The series includes two types of engines: 4 and 8 Gearboxes, respectively with airflow of 88m<sup>3</sup>h and 176m<sup>3</sup>h, in the wall and floor versions.

Once again our technicians and designers have managed to outdo themselves, developing a series with unique and distinctive characteristics, such as the perfect soundproofing of 16dBA for the 4 Gearbox version and 20dBA for the 8 version, which is the most silent of all the known market, all enclosed in a captivating as well as elegant case.

Another distinctive and unique feature is the "Taylor Made" service, which will be available for all **IKON** series products.

In the launch phase, we decided to create a brochure dedicated to **IKON**, in order to produce a document capable of emphasizing the series both for its technical and aesthetic characteristics. You will certainly be pleased that, despite the higher production costs of this new version, we have managed to mitigate the pricelist, so as not to create a psychological barrier to purchase.

In fact, you will notice that the wall version costs slightly less than the **AIRBox** version and in the **Tower** version the increase is reduced to a minimum but, if we were to consider the installation costs, the savings for the customer would be very evident.

We are sure that you will appreciate the company efforts both for the cost of the investment and for the adequate response to the needs of sanitizing of large spaces, we wish you a good job for the future of all of us.
